

## The Business Case for Mobile Audits

Most companies conduct weekly, monthly, or quarterly audits and inspections of safety, environmental and quality control issues. Historically done with pen, paper, Excel and Word, these reports provide business benefits, but can quickly become time-consuming. The time spent finding information that is

spread out over different documents makes important regular tasks a challenge. Comparing data or spotting trends across your organization becomes a burden. What's more, the risk of data loss and human error is often impossible to measure.

**Do you have an internal auditing tools in place?**

Yes; we use an electronic software system.	<b>9</b>	31%
Yes; we use a combination of Excel, Word and paper.	<b>14</b>	48.3%
Yes; we use paper and pen.	<b>4</b>	13.8%
No; we have external consultants conduct our audits.	<b>0</b>	0%
Unsure	<b>2</b>	6.9%

In the 21st century, businesses looking to optimize their inspection process and do more with their data are turning to digital and mobile solutions to reduce time and improve data analysis. With affordable mobile devices such as iPad and Android, taking your business processes and increasing the number of inspections you do has never been easier. With a mobile solution, a team of auditors, inspectors and plant managers can conduct inspections and automatically synchronize their data without the hours of paperwork. A mobile auditing solution can help you upgrade your inspection program for the modern era.
